

## FeedOS Developer Notice

### New APIs

Notice Reference	20110210
Scope	APIs
Exchanges	All Exchanges
Effective Date	2011-02-10
Impact	MetaData & Extended MBL

Dear FeedOS developer,

Please be advised that the following APIs are available on [www.quanthouse.com/download](http://www.quanthouse.com/download)

- C++ API: v3.7.0.1
- Java API: v3.9.0.0
- C# API: v2.5.0.0

These APIs contain:

1. The MetaData functionality which download automatically the MIC codes and tags after the user login.  
Thanks to the MetaData your API will always be updated with the latest tags and MIC codes.

If you want to dump manually the MetaData, you can use the feedos\_cli request getMetaData.

2. The Extended MBL which is an enhancement of the Level 2 subscription will be supported, for more details please refer to the documentation Extended MBL Starting Guide available on [www.quanthouse.com/download](http://www.quanthouse.com/download)

Please be aware while migrating old code to MBL extended, that the MBLDeltaRefresh event contains two actions BidRemoveLevelAndAppend & AskRemoveLevelAndAppend that must be handled

For additional support please contact [support@quanthouse.com](mailto:support@quanthouse.com)
